Farm and Garden

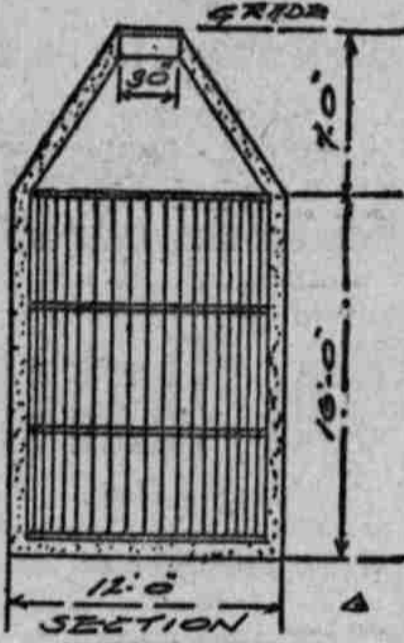

CEMENT LINED CISTERN.

Impurities in Rainwater May Be Easily Extracted

To provide against a water famine during a dry time an extra cistern or two is a good investment. The purest water we get is rainwater, a fact that has been brought to the attention of different states by the boards of health.

Disease germs follow rainwater down into the soil to percolate through to the well. Persons using the water continually become immune, so they may not contract a serious disease for years, but a severe cold may weaken their vitality and disease resisting power, so they may become infected at any time.

Strangers drinking the water are especially liable, because their systems are not fortified against the peculiar

CISTERN LINED WITH STAVES.

dangers lurking in that vicinity. Every full city paper contains accounts of typhoid that has been brought home from country places by people while away on their annual vacation trips.

With cistern water it is different, as the principal contamination of rainwater comes from dirt on the roof. The water itself is pure enough until it strikes the roof. Some farmers have two cisterns. They let the first water from a rain shower run into one cistern, then switch the leader to the other one, which is used for house purposes.

Good, durable cisterns in clay or loamy ground may be made by plastering cement mortar directly on the earth surface of the excavation. In some sections of the country a great many cisterns are made this way and covered by putting timbers across and building a floor of double thick inch stuff, laid to break joints. The spaces over the wall and between the timbers are filled in with cement, and a drain is cut in one side while the cement is soft. A cistern built in this way may last for ten or twelve years without any trouble, but there is no certainty about it.

A great deal better way is to make a round form of heveled staves tightly hooped to hold them in place. Then dig the excavation four or six inches larger all around than the outside of the wooden form. Then mix concrete made of one part best portland cement, two parts clean, sharp sand and four parts broken stone.

If the cistern is small have the form all ready to lower by erecting a tripod with pulley and tackle to lift it gently down. Then put in a floor of concrete the full size of the excavation. Tamp it thoroughly to pound the air out and make it set solid. Before this has time to harden lower the wooden form and fill in the sides so the bottom and sides will unite, making one solid stone.

An easy way to make the neck of the cistern is to put a floor of boards on top of the circular wooden form and pile earth on this floor, packing it down cone shaped, high enough to reach the grade level. To form the circular opening at the top make either a

Fertilizing the Orchard.
It might be said that it is always reasonable to fertilize the orchard or garden. Manure placed on this soil this winter will partially decay and its riches soak into the soil for the use of the plants next year. It not only serves as a fertilizer in the orchard, but in winter it acts as a soil protection and regulates sudden freezing and thawing. On hilly land it checks soil erosion.

Asking Too Much.
Photographer—Look pleasant, please. Miss Grogan—At her looks or yen?—Puck.

FORAGE CROPS FOR PIGS.
Favorable Results From Experiments Made From Green Crops.

The question of forage crops for pigs is one which is of decided importance, as it is well known that the use of such feed is valuable and profitable.

Cowpeas without grain have so far given better results at the Mississippi station, it is stated, than any other of the crops tested. In one season the cowpeas were grown on thin hill land and produced 350 pounds of pork per acre when pigs were grazed upon them. The next season the crop was grown on good valley land and produced 483 pounds of pork per acre. The pigs were turned on the pasturage when the cowpeas were ripe. Alfalfa without grain was found "to be little more than a maintenance ration for hogs." The pigs used in the test, which covered two years, ranged from three to twenty-four months in age.

Alfalfa, clover, rape and blue grass supplementing corn were compared with rations of corn and ship stuff and corn and skim milk at the Missouri station. The cornmeal, which was of medium fineness, was mixed with water to the consistency of a thick dough and was fed twice daily in such quantities as would be eaten without waste. In the skim milk ration the meal was wet with milk instead of with water. The green crops were fed twice daily immediately after cutting and were supplied ad libitum. The rape was rather large and coarse, and only the fresh green leaves were used. Some of the alfalfa was rather too mature and coarse to be eaten with relish, but the remainder was considered of fairly satisfactory quality. The red clover and blue grass were for the most part young and tender.

The feeding was continued for 102 days except with the rape fed lot, which was fed for forty days only, the supply of rape being then exhausted. Considering the first forty days, the gains on green feed ranged from 0.58 pound per pig per day on the rape ration to 0.74 pound on cornmeal and alfalfa, the gain on cornmeal and middlings being 0.61 pound and on cornmeal and skim milk 1.53 pounds. Considering the whole test, the average daily gain per pig on the rations containing green feed was as follows: Cornmeal and blue grass, 0.63 pound; cornmeal and clover, 0.71 pound; cornmeal and alfalfa, 0.83 pound; cornmeal and middlings, 0.68 pound; and on cornmeal and skim milk 1.61 pounds. The smallest amount of grain per pound of gain, 2.83 pounds, was noted with the corn and skim milk ration and the largest amount, 5.31 pounds, with the cornmeal and blue grass. The gain was most cheaply made on cornmeal and skim milk, costing 2.83 cents per pound, and was most expensive on cornmeal and middlings, costing 4.07 cents. On the green feeds it ranged from 3 cents on cornmeal and alfalfa to 2.93 cents on cornmeal and blue grass.

ABOUT THE STATE

The university of Vermont ball team will play Yale at New Haven on May 20.

Miss Elizabeth Root, probably the oldest resident of Bennington, died Wednesday morning. She was in her 92nd year having been born at Montague, Mass., March 19, 1817. She taught school for a number of years in St. Louis and had been a resident of Bennington for 50 years.

Edward Lawler of Bellows Falls was elected a village trustee on Monday and was further honored Tuesday when he was appointed inspector of the sulphite plants of the International Paper company from Maine to Niagara Falls, N. Y. Mr. Lawler was born in Causeway, County Kerry, Ireland, 43 years ago. He has resided in Bellows Falls 23 years during which time he has been employed in the L. P. mills. For 12 years he has been foreman of the sulphite mill. His new position carries a large salary and he assumes its duties Monday.

Mrs. Henry James, wife of Dr. Henry James of Waterbury, died suddenly of heart trouble Tuesday after an illness of only two weeks. Her death came as a shock to her many friends as her illness had not been considered serious. Mrs. James was prominently identified with the Congregational church and had for many years been a trustee of the public library. She was born 71 years ago in Boston, where she lived until she married. She is survived by her husband and a brother, Edward H. Hall of Boston. The funeral service was private with burial in the family lot.

George H. Weber, who served in Company C, 4th Vermont volunteers and who has been an inmate of the Soldiers' Home at Bennington since November, is endeavoring to ascertain the whereabouts of a wife and two sons and a daughter who were living in Denver, Colo., at the time he was obliged to enter one of the soldiers' homes in the West because of ill health. He went first to the national home in Nebraska and later was an inmate of the home at Hampton, Va., and also at Tribune, Mt. In a letter to the National Tribune he writes that at Bennington, for the first time he found a real home.

It has been decided that another examination for those recently elected to higher offices in the state, by the Vermont National Guard, must be held. At the recent examination in Hartford, four out of seven candidates received their commissions and the examinations will be given the other three at a later date. These who received commissions were Capt. Stephen S. Cushman, First Lieutenant Charles A. Bell and Second Lieutenant John F. Sullivan of Company B; Fred A. Ferris, Second Lieutenant of Company C. Those failing to pass were in Company H and L.

A report on the condition of the St. Albans city reservoir water at Fairfax has been received from the state laboratory of hygiene at Burlington which states that the sample contained coliform bacteria in the amount of 15 per cubic centimeter. The samples also showed sewage contamination. It will be recalled that there was some fear that contamination would exist owing to the fact that excrement from a typhoid case near the reservoir had been thrown on the ground without being disinfected, and the unfavorable report was not unexpected. The city has now urged the necessity of boiling the water for domestic purposes as it will be several months in all probability before the water will again be pure.

The total number of boats loaded with lumber consigned to Burlington firms and entering the harbor during the season of 1908 was 89. Of these 45 were sail or "pin" boats, 30 were canal boats and 14 were blue barges. The large Canadian boats. The total number of feet of lumber brought was approximately 16,500,000. Although this was called a fair year, it was not nearly as large as the season of 1907, when 26,000,000 feet of lumber was brought into Burlington, the total number of boats being 148. The early part of the season, just closed, was very dry. In the latter part, however, business took a turn for the better and a large part of the lumber was brought in then.

Conservation in Plain English.

Under the above title, Senator Smoot of Utah is quoted in Suburban Life of February as saying: "We should plant trees to protect farms from wind and to make stripped or treeless lands productive—an area larger than Pennsylvania, Ohio and New York combined; but, so far, lands successfully planted to trees make a total area smaller than Rhode Island. One-fourth of the standing timber is left or otherwise lost in logging. The boxing of the long-leaved pine, for turpentine, has destroyed one-fifth of the forests worked. We spend millions of dollars in river and harbor improvements to repair the damage which at the cost of mere thrift and foresight, could have been nearly all avoided."

STEPHENSON ONE VOTE SHORT.
Senator Again Fails to Secure Re-election.

Madison, Wis., Jan. 29.—United States Senator Stephenson again yesterday lacked one vote of re-election. When the second ballot in joint assembly was taken he received sixty-six votes. Present, 123; necessary to a choice, 67.

Hemorrhoids.

Commonly known as piles of the blind, bleeding or protruding variety are readily benefited by an application of Hill's Pile Pomade. Piles cause the most distressing of pains, frequently driving the patient to points of desperation. Don't suffer with piles when you can get a guarantee relief at a cost of \$1.00. D. F. Davis.

F. B. CATE, H. A. FLOOD.

ILLINOIS DEADLOCK STANDS.

There Was No Election on Twenty-second Ballot.

Springfield, Ill., Jan. 29.—The deadlock in the Illinois legislature on election of a United States Senator to succeed Albert J. Hopkins remains unbroken. The only ballot taken yesterday, the twenty-second, resulted: Hopkins 72, Fox 19, Stringer 74, Shortell 14 and 14 votes scattering. Balloting will be resumed next Tuesday.

For Sale

REAL ESTATE FOR SALE
FARM FOR SALE.—Mrs. Carrie Bassett has placed her 50-acre farm with us for immediate sale. The farm is located on Prospect street, near the depot, and is a very desirable place. It is a No. 1 place, the buildings extra good, especially the house which has 12 rooms. The farm will suit any family of four or five persons. Wood enough to supply the house. An extra good apple orchard, 100 barrel a year. Excellent water for drinking. Good corn. This place is unsurpassed. There is another house on the place that has not been finished, is now ready to plaster. For a better description call on the F. B. Cate Real Estate Agency or Mr. Bassett on the premises. Photo at our office.
